

JING XIAN CHING

SECURITY ENGINEER (BLUE TEAM) | OFFENSIVE SECURITY CAREER TRACK | CEH | CPTS & OSCP (IN PROGRESS)

Singapore | jingxian06@hotmail.com | 96497230 | [LinkedIn](#)

PROFILE

Security Engineer (Blue Team) with hands-on experience in **OS hardening, enterprise firewall management, and network security operations**. Experienced working with **Fortigate and Check Point firewalls**, including firewall policy management and hands-on lab configuration of high availability and site-to-site IPsec VPN setups. Background in **full-stack software engineering** provides strong understanding of application architecture and common vulnerability root causes. Proven ability to support both **physical and logical network infrastructure**, including installation, configuration, and technology refresh of switches, routers, and firewalls. **CEH certified** and actively pursuing **OSCP and CPTS**, with the long-term goal of transitioning into **penetration testing and offensive security**.

PROFESSIONAL EXPERIENCE

Cyber Security Engineer (Blue Team), Inventivo

Mar 2026 to Present

- Perform **OS hardening and baseline security configuration** across Windows systems to align with security best practices.
- Configure **Active Directory Certificate Services (AD CS)** infrastructure in a Windows Server 2019 lab environment, including **Root CA (RCA) and Intermediate CA (ICA)** setup.
- Generate and manage **digital certificates**, including signing certificates with different validity periods to support internal authentication scenarios.
- Configure **certificate templates and trust chains** to enable secure certificate issuance and validation across systems.
- Gain hands-on experience with **enterprise PKI architecture and certificate lifecycle management**.

Network Security Engineer, Inventivo

Dec 2025 to Mar 2026

- Implemented and managed enterprise firewall policies and access control rules using Fortigate and Check Point firewalls.
- Configured network segmentation using Fortigate firewalls in a lab environment to understand segmentation strategies and traffic isolation.
- Configured Fortigate High Availability (HA) clusters in a lab environment to study failover behaviour and firewall redundancy.
- Implemented site-to-site IPsec VPN tunnels in a lab setup to simulate secure inter-site communication.
- Configured routing and firewall policies to allow secure traffic across IPsec tunnels in a simulated environment.
- Monitored network traffic and reviewed firewall logs to identify anomalies and validate security configurations.
- Conducted physical network operations including cabling, installation, and configuration of switches, routers, and firewalls.
- Participated in network device refresh activities, replacing legacy switches, routers, and firewalls with newer models to improve performance and capabilities.
- Conducted hands-on firewall and network security experimentation in lab environments to deepen understanding of HA, VPN, and network segmentation concepts.

ICA Call Centre Agent (Part-Time), ICA

May 2025 to Nov 2025

- Handle enquiries related to passports, NRICs, student pass, long-term visit pass, permanent residence, and citizenship, ensuring accuracy and compliance with government regulations.
- Manage sensitive personal data with discretion, reinforcing awareness of confidentiality and information security protocols.
- Apply problem-solving skills to resolve complex queries and escalate cases appropriately.
- Collaborate with team members to maintain service efficiency and adherence to regulatory standards.

Aviation Security Officer (Part-Time), CERTIS

Oct 2024 to Oct 2025

- Conduct security screening and access control in compliance with aviation security regulations.
- Respond to incidents promptly, demonstrating situational awareness and risk assessment skills.
- Collaborate with security teams to maintain a safe and compliant environment.
- Reinforce cybersecurity-relevant skills such as threat detection, response, and adherence to security protocols.

Software Engineer, ST Engineering

May 2022 to Dec 2023

- Integrated spreadsheet data into relational databases, improving accuracy and efficiency.
- Developed a scheduling system using AngularJS (frontend) and Java Spring Boot (backend).
- Designed and implemented APIs for secure and reliable data flow.
- Enhanced UX with filtering, sorting, and validation to ensure data integrity.

EDUCATION

MAGES Institute of Excellence

Professional Certificate in Cybersecurity

Mar 2025 to Sept 2025

University of Wollongong

Bachelor of Computer Science (Game & Mobile Development)

2020 to 2022

SIMGE

Diploma in Management Studies

2012 to 2014
