

JING XIAN CHING

SECURITY ENGINEER

Singapore | jingxian06@hotmail.com | 96497230 | [LinkedIn](#)

Security Engineer | Endpoint Security | Carbon Black EDR | Windows Hardening | PKI | Vulnerability Management | CEH | Self-Paced CPTS & OSCP Study

PROFILE

- **Security Engineer (Blue Team)** with hands-on experience in endpoint security, enterprise infrastructure hardening, vulnerability remediation, and network security. Experienced in deploying and administering Carbon Black EDR in both internet-connected and air-gapped environments, implementing Windows security baselines, managing enterprise PKI infrastructure, and supporting offline security product installation and patch management.
- Previously worked as a Network Security Engineer managing Fortigate and Check Point firewalls, firewall policies, network segmentation, and IPsec VPN infrastructure. A background in full-stack software development provides strong understanding of application architecture and vulnerability root causes, enabling effective collaboration between development, infrastructure, and security teams.
- CEH certified and currently progressing through self-paced Hack The Box CPTS and OSCP studies alongside full-time professional commitments, with a long-term goal of transitioning into offensive security and penetration testing while leveraging a strong foundation in blue team operations and infrastructure security.

PROFESSIONAL EXPERIENCE

Cyber Security Engineer (Blue Team), Inventivo

Mar 2026 to Present

- Perform OS hardening and baseline security configuration across Windows systems in accordance with enterprise security best practices.
- Deploy and configure Carbon Black EDR in both internet-connected and air-gapped environments, including standalone and clustered architectures.
- Configure Carbon Black WebUI custom ports, Windows and Linux sensors, LDAP/LDAPS authentication, and cluster components for enterprise endpoint protection.
- Perform offline installation, upgrade, and patch management of enterprise security products including Carbon Black EDR and Symantec security solutions.
- Configure Active Directory Certificate Services (AD CS), including Root CA (RCA) and Intermediate CA (ICA), certificate templates, trust chains, and certificate lifecycle management.
- Coordinate with Vulnerability Assessment & Penetration Testing (VAPT) teams to remediate identified security findings and verify successful implementation of corrective actions.
- Support OS patching, security updates, and baseline maintenance to strengthen enterprise infrastructure security posture.
- Troubleshoot complex enterprise security platform issues, document root causes, and develop operational deployment and troubleshooting guides for internal knowledge sharing.

Network Security Engineer, Inventivo

Dec 2025 to Mar 2026

- Implemented and managed enterprise firewall policies and access control rules using Fortigate and Check Point firewalls.
- Configured network segmentation using Fortigate firewalls in a lab environment to understand segmentation strategies and traffic isolation.
- Configured Fortigate High Availability (HA) clusters in a lab environment to study failover behaviour and firewall redundancy.
- Implemented site-to-site IPsec VPN tunnels in a lab setup to simulate secure inter-site communication.
- Configured routing and firewall policies to allow secure traffic across IPsec tunnels in a simulated environment.
- Monitored network traffic and reviewed firewall logs to identify anomalies and validate security configurations.
- Conducted physical network operations including cabling, installation, and configuration of switches, routers, and firewalls.
- Participated in network device refresh activities, replacing legacy switches, routers, and firewalls with newer models to improve performance and capabilities.

- Conducted hands-on firewall and network security experimentation in lab environments to deepen understanding of HA, VPN, and network segmentation concepts.

ICA Call Centre Agent (Part-Time), ICA

May 2025 to Nov 2025

- Handle enquiries related to passports, NRICs, student pass, long-term visit pass, permanent residence, and citizenship, ensuring accuracy and compliance with government regulations.
- Manage sensitive personal data with discretion, reinforcing awareness of confidentiality and information security protocols.
- Apply problem-solving skills to resolve complex queries and escalate cases appropriately.
- Collaborate with team members to maintain service efficiency and adherence to regulatory standards.

Aviation Security Officer (Part-Time), CERTIS

Oct 2024 to Oct 2025

- Conduct security screening and access control in compliance with aviation security regulations.
- Respond to incidents promptly, demonstrating situational awareness and risk assessment skills.
- Collaborate with security teams to maintain a safe and compliant environment.
- Reinforce cybersecurity-relevant skills such as threat detection, response, and adherence to security protocols.

Software Engineer, ST Engineering

May 2022 to Dec 2023

- Integrated spreadsheet data into relational databases, improving accuracy and efficiency.
- Developed a scheduling system using AngularJS (frontend) and Java Spring Boot (backend).
- Designed and implemented APIs for secure and reliable data flow.
- Enhanced UX with filtering, sorting, and validation to ensure data integrity.

EDUCATION

MAGES Institute of Excellence

Mar 2025 to Sept 2025

Professional Certificate in Cybersecurity

University of Wollongong

2020 to 2022

Bachelor of Computer Science (Game & Mobile Development)

SIMGE

2012 to 2014

Diploma in Management Studies
